Gyaneshwar Malba

Salesforce, Databricks, AWS, RAG, Agentic Workflows, LegalTech

Beaverton, OR | gyaneshwar0821@gmail.com | linkedin.com/in/gyaneshwarmalba | github.com/gyaneshwarmalba | gyaneshwarmalba.github.io

PROFESSIONAL SUMMARY

Lead Software Engineer with 9+ years of experience designing and modernizing enterprise platforms across Salesforce, legal technology, cloud integrations, data workflows, and applied AI. Strong record translating ambiguous business needs into governed, production-ready systems spanning contract workflows, identity/access automation, document integrations, event-driven APIs, release readiness, and secure engineering. Currently positioning enterprise Salesforce and integration experience toward AI architect roles focused on Databricks, RAG, agentic workflows, LLM evaluation, governance, and human-in-the-loop automation.

CORE SKILLS

AI / Data Architecture	RAG architecture, governed LLM workflows, human-in-the-loop review, AI governance observability, LLM evaluation concepts, Databricks and Delta Lake concepts, Salesforce-to-Databricks sync patterns, LangGraph concepts
Salesforce	Apex, Lightning Web Components, Flows, SOQL, Salesforce APIs, metadata deployment, Experience Cloud concepts, profiles, permission sets, JIT provisioning, SSO
Cloud / Integration	AWS Bedrock concepts, EventBridge, SQS, Lambda, S3, API Gateway, REST APIs, platform events, queue-based processing, OAuth concepts, Box, Adobe Sign, ServiceNow, Okta
Engineering	Python, FastAPI concepts, JavaScript, SQL, PostgreSQL, Terraform concepts, GitHub, Jenkins, Copado, CI/CD, release management, secure SDLC
Leadership	Technical solution design, stakeholder discovery, cross-functional delivery, production support, documentation-driven delivery, mentoring, operational readiness

PROFESSIONAL EXPERIENCE

Lead Software Engineer | Nike | *June 2025 - Present* | *Portland, OR*

- Created AI Legal Metadata Extraction Application as a POC for Legal Innovation Team with the help of Salesforce, Databricks and Frontend Frameworks
- Lead enterprise legal-technology modernization across Salesforce, cloud integrations, document workflows, data foundations, and applied AI initiatives supporting legal and operations stakeholders.
- Architect and deliver Salesforce platform enhancements across contract records, approvals, roles, access controls, document handling, custom UI/workflow capabilities, and production support.
- Build and validate event-driven integration patterns using Salesforce platform events, AWS EventBridge, SQS, Lambda, REST APIs, PostgreSQL/Flyway concepts, and repeatable deployment validation.
- Advance AI-ready architecture patterns for contract workflows, including governed RAG concepts, AWS Bedrock/Claude positioning, human review checkpoints, metadata extraction, and downstream workflow automation.
- Support Salesforce-to-Databricks data foundation planning for contract, HR, user, and reporting use cases, emphasizing governed tables, validation logic, lineage, and downstream analytics readiness.
- Direct and mentor a distributed engineering team through design reviews, implementation planning, PR feedback, release readiness, and reusable documentation across Salesforce, AWS, Databricks, and AI architecture patterns.
- Improve operational reliability through structured logging, validation checklists, release playbooks, sandbox readiness, certificate/support documentation, and production issue triage.
- Partner with legal, security, data, identity, platform, and business teams to balance delivery urgency with governance, access control, auditability, and long-term maintainability.

Software Engineer II | Nike | *January 2023 - June 2025* | *Portland, OR*

- Engineered Salesforce user provisioning and deprovisioning automation across JIT handlers, Okta, SSO, profiles, permissions, and identity group workflows, improving lifecycle reliability and license stewardship.
- Delivered Salesforce integrations with Box, Adobe Sign, Tableau, ServiceNow, and downstream cloud services to modernize legal document, reporting, signature, request, and support workflows.

- Implemented and validated Salesforce-to-cloud event integration patterns using platform events, queues, API resources, environment-specific setup, and operational runbooks.
- Introduced structured logging and troubleshooting patterns that improved debugging visibility across environments and reduced recurring support ambiguity.
- Led recurring release readiness across multiple Salesforce applications by coordinating seasonal-release impact reviews, sandbox validation, business communication, CI/CD validation, and production deployment steps.
- Strengthened platform governance through DKIM/email security work, access troubleshooting, data-quality fixes, record relationship cleanup, and documented rollback/verification procedures.

Salesforce Developer | Tek Leaders Inc | *July 2018 - January 2023* | *United States*

- Advised multiple enterprise clients on Salesforce solution design across Sales Cloud, Service Cloud, automation, integrations, release management, and production support.
- Built and maintained Apex, Lightning, workflow automation, SOQL, metadata, and integration components supporting scalable and maintainable Salesforce applications.
- Led end-to-end package deployments, pre-deployment validation, post-deployment troubleshooting, and quarterly Salesforce release updates to reduce regression risk.
- Improved data consistency and platform resilience through record-locking strategies, backup automation, technical recovery exercises, and root-cause support improvements.
- Modernized legacy workflows, including Classic-to-Lightning migration and process automation improvements, to improve usability, adoption, and operational efficiency.

E Support Officer | Knoah Solutions | *December 2013 - August 2015* | *Hyderabad, India*

- Delivered technical support for software, hardware, network, login, configuration, and performance issues while maintaining clear procedural documentation.
- Supported testing, rollout, and user adoption of business applications and smart-device workflows for field teams.

SELECTED AI ARCHITECTURE PORTFOLIO

- **AI Legal Contract Analyzer:** Designed a public portfolio concept for a governed RAG pipeline that ingests legal documents, chunks and retrieves relevant clauses, extracts contract metadata, and supports human-in-the-loop review.
- **Multi-Agent Legal Workflow:** Designed an agentic legal workflow concept using specialist agents, tool use, routing, policy checks, and human approval checkpoints.
- **Salesforce-Databricks Connector:** Planned a governed Salesforce-to-Databricks synchronization concept focused on analytics-ready data, validation, lineage, and downstream AI/reporting use cases.
- **AI Governance Dashboard:** Defined an observability concept for AI systems covering traces, policy checks, cost/latency monitoring, alerts, evaluation signals, and human review hooks.
- **AWS Salesforce Event Driven Integration:** Designed and developed AWS Salesforce Event driven integration that helped streamlined legal data to serve to different business

CERTIFICATIONS

Salesforce Certified Administrator; Salesforce Certified Platform App Builder; Salesforce Certified Platform Developer I; Salesforce Certified Advanced Administrator; Salesforce Certified Sales Cloud Consultant; Copado Certified; AWS Cloud Practitioner

EDUCATION

Midwestern State University: Master's Degree, Computer Science, 2017
Jawaharlal Nehru Technological University, Hyderabad: Bachelor of Technology, Electronics and Communication Engineering, 2012
